ABSTRACT

A guidance display device that displays appropriate guidance for a screen, wherein the screen includes display regions. Specifically a guidance display region for guiding a user's operation includes: guidance content holding units which previously hold guidance display contents respectively corresponding to display regions to be operated by the user and are included in one screen; a guidance synthesis unit which obtains the guidance display contents respectively corresponding to the display regions from the guidance content holding units, and synthesizes the obtained guidance display contents into one; and a guidance display unit which displays the guidance display contents synthesized by the guidance synthesis unit on the screen.
